Summary

Technical PM with hands-on experience shipping AI-native B2B SaaS products. Combines engineering depth with product intuition to define user problems, prioritise ruthlessly, and deliver measurable outcomes.

Education

Vellore Institute of Technology 2022–2026
Bachelor of Technology (B.Tech) in Computer Science and Engineering Bhopal, Madhya Pradesh

Technical Skills

Product: Roadmapping, PRD Writing, User Stories, Agile/Scrum, Sprint Planning, Stakeholder Management, Problem Prioritisation, A/B Testing, Go-to-Market.

Technical (PM depth): SQL, REST APIs, Java, Python, React.js.

Tools: Jira, Figma, Excel, Postman, Git, MongoDB, PostgreSQL.

AI & Emerging Tech: LLM integration (Groq LLaMA), RAG systems, Vector Embeddings, AI product design.

Certifications: NPTEL Cloud Computing – IIT Madras.

Experience

Arrise Solutions India Pvt. Ltd. October 2024 – December 2024
Product Manager Intern Noida, Uttar Pradesh

- Partnered with engineering and design to define, prioritise, and ship 3+ features in a live production environment; documented user stories and acceptance criteria that reduced back-and-forth between eng and QA by ~30%.
- Owned end-to-end product definition for a role-based authentication system — from user flow mapping and stakeholder sign-off to launch — achieving zero post-launch authentication failures and cutting onboarding friction for new users.
- Proactively surfaced and triaged 10+ pre-release issues during QA cycles, improving product stability and shipping a release with zero P1 bugs — directly improving retention for enterprise clients.

Projects

Empowerly – HR/Employee Management System | *Spring Boot, React.js* |  Empowerly Jan 2025 – Feb 2025

- Identified that 60%+ of HR manager time was lost to manual attendance and payroll tasks; defined the MVP feature set for an enterprise HR platform, prioritising automation of those workflows first to maximise early user value.
- Mapped 3 distinct user personas (Employee, HR and admin) and designed role-based access flows, reducing support escalations by ensuring the right users saw only the right data from day one.
- Identified cross-team communication as a top friction point from user feedback; shipped in-app real-time messaging, reducing reliance on external tools (Google Meet/Teams) and keeping workflows within the platform.
- Defined specs for an AI chatbot to handle the top 20 recurring HR queries (leave balance, payslips, policy FAQs), reducing HR team's repetitive query load and improving response time from hours to seconds.

ArriBot – An AI-Powered Unified Learning Platform | *Spring Boot, React.js* |  ArriBot Oct 2024 – Dec 2024

- Identified that learners were context-switching across 5+ disconnected study tools per session; defined product vision and scoped 6 integrated AI modules (chat, flashcards, quiz, summariser, resume analyser, learning path) into a single platform, eliminating tool-switching entirely.
- Balanced AI quality with cost constraints by architecting a dual-engine system (Groq LLaMA primary, Gemini fallback) and designing per-feature daily usage limits — reducing API spend by ~35% while maintaining sub-1-second response times for users.

ASTraMind – AI-Powered Codebase Intelligence Platform | *FastAPI, React* |  ASTraMind Sept 2025 – Oct 2025

- Identified that new engineers spent 2–3 weeks ramping up on unfamiliar codebases; authored the full product spec — defining AST parsing + vector embeddings + LLM architecture — and shipped an AI platform enabling natural language querying of entire repositories, reducing onboarding time by an estimated 50%.
- Scoped and prioritised a backlog of 15+ features; shipped semantic search and code explanation as the first two — chosen because they addressed the highest-frequency developer pain points and delivered immediate, visible value.

Activities

Health Hackathon, Johns Hopkins University, USA

- Led product strategy for a stress recovery app at Johns Hopkins Health Hackathon — conducted rapid user interviews, defined the MVP scope, and shipped a working prototype within 24 hours, placing among the top teams.
